

Lakehouse Daily Incident Report

Executive Summary

The lakehouse system was monitored, and a total of 2 tables were checked with 18 health checks performed. The average health score of the system is 90, indicating a healthy state. There were no maintenance runs, ETL runs, or alerts reported during this period.

Lakehouse Health

The lakehouse health checks were performed on the 'local.silver.orders' and 'local.silver.order_items' tables. All health checks reported a score of 90, indicating a healthy state. The health checks monitored parameters such as snapshot count, data file count, average file size, total size, manifest file count, and orphan file count.

Maintenance Activity

There were no maintenance activities reported during this period.

ETL Activity

There were no ETL runs reported during this period.

Alerts

There were no alerts reported during this period, indicating that the system is operating within normal parameters.

Overall Assessment

The overall assessment of the lakehouse system is that it is in a healthy state, with all health checks reporting a score of 90. The lack of maintenance activities, ETL runs, and alerts suggests that the system is stable and operating as expected.

Recommendations

No specific recommendations are made at this time, as the system appears to be operating within normal parameters. However, it is recommended to continue monitoring the system to ensure that it remains in a healthy state and to address any potential issues that may arise.
